

3-zone cleaning

Always clean and one step ahead

EMCO

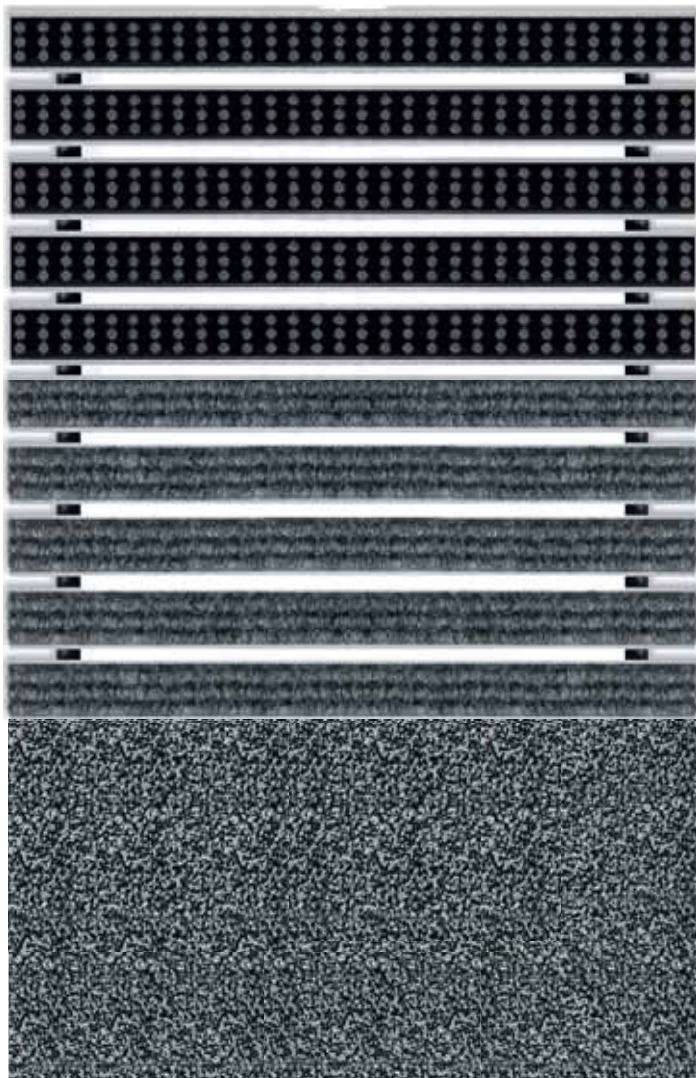

The emco 3-zone cleaning system

A preventative concept for cleanliness

First impressions are everything. And that is why the entrance area of any building needs to emanate cleanliness and epitomise colour coordination. The emco 3-zone cleaning system transforms entrance lobbies into clean reception areas and is an efficient way to protect buildings against the problem of dirt. Zone 1 focuses on removing coarse dirt, zone 2 on brushing off fine dirt and zone 3 is responsible for absorbing residual dirt and moisture.

The system can be perfectly adapted to the conditions. Not only that, but it permanently reduces the amount of cleaning required by adjacent floor coverings and increases their service life considerably.

The sheer diversity of available products and designs means that precise and highly customised solutions can be created for an extremely wide range of architectural and technical requirements – so your building can make a great first impression emanating quality and cleanliness.

Zone 1

Coarse dirt

Coarse dirt is brushed off in zone 1 thanks to the rubber or cassette-brush inserts. Suitable for use indoors and out. With certified non-slip properties.

Zone 2

Fine dirt

Coarse fibre ribbed carpet inserts for brushing off fine dirt. The non-slip insert material is suitable for indoor use and for use in covered outdoor areas.

Zone 3

Damp and residual dirt

Inside buildings, the non-slip emco clean-off floor coverings are extremely effective at absorbing moisture and residual dirt, thereby preventing footprints.

Combinations – options

Individual solutions for all requirements

Ideal for any entrance situation: The 3-zone cleaning system is used either entirely inside the building or both indoors and out, depending on how much space is available. The larger the area to walk on, the better. The smaller the area to walk on, the more innovative the solution becomes: If necessary, zones 1 and 2 can be combined in a single emco entrance mat system.

In keeping with the architecture: The technology, shape and colours used must fit in with the overall architectural concept. Depending on specifications, emco entrance mats can be provided with curves, angles or cut-outs. The large choice of colours and designs opens up a whole host of options.

Numerous additional components (such as an LED illuminated frame system or a stainless steel profile with laser-engraved name) are available for a personal and rather exclusive touch.

Combination A – Classic

3-zone cleaning covering indoor and outdoor areas

Entrance mats in the outdoor area, porch and indoor clean-off area

1

emco entrance mat system with rubber and/or cassette brush G, CB, GCB

2

emco entrance mat system with ribbed carpet insert

1+2

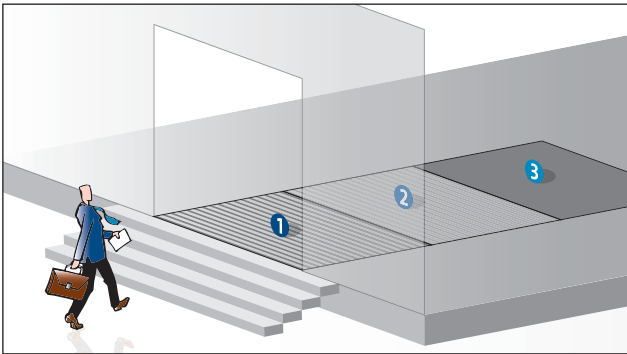

emco entrance mat system with ribbed carpet/rubber (RG) or ribbed carpet/cassette brush (RCB)

3

emco clean-off system

Combination B – Indoor 1

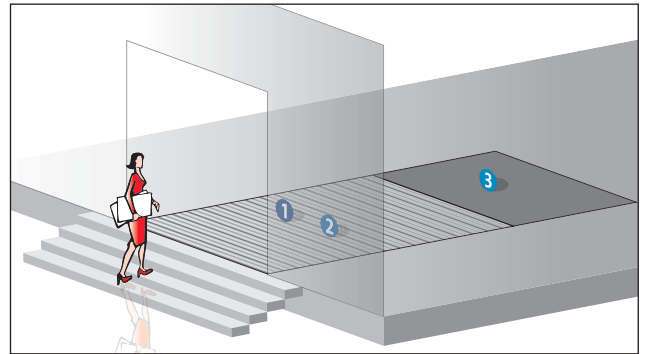

3-zone cleaning in indoor areas only

Also a highly viable option when it is impossible to install a mat in the outdoor area

Combination C – Indoor 2

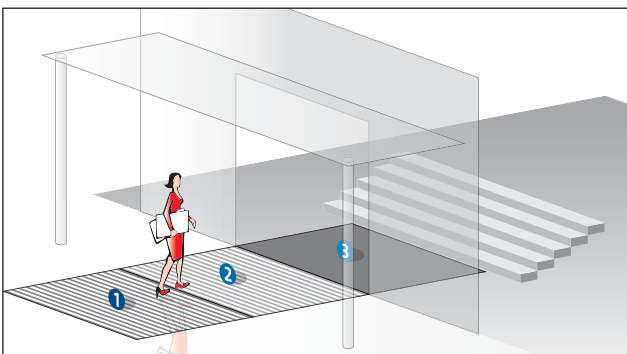

3-zone cleaning in indoor area only

As combination B, but with entrance mat insert combination

Combination D – Outdoor 1

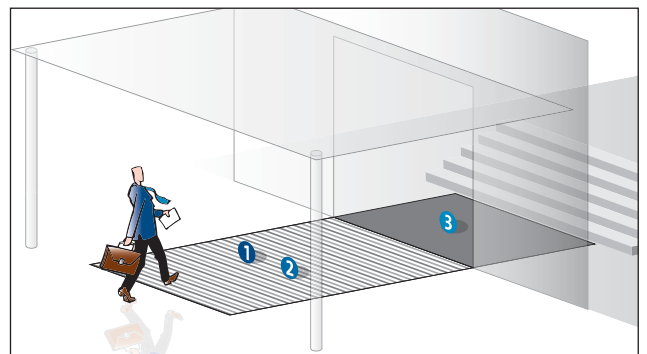

3-zone cleaning covering indoor and outdoor areas

Also a highly viable option when the walking depth makes it extremely difficult to install a mat in the indoor area

Combination E – Outdoor 2

3-zone cleaning covering indoor and outdoor areas

As combination D, but with entrance mat insert combination only suitable for covered outdoor areas

Benefits

Unbeatable facts

Dirt and moisture are contained and remain in the entrance area, keeping the lobby clean and attractive. As a rule, the longer the clean-off zone, the cleaner the inside of the building.

Up to 90% less dirt

The emco 3-zone cleaning system reduces dirt by up to 90%. On average, buildings without an entrance matting system have to be cleaned thoroughly once every two weeks. With the emco 3-zone cleaning system, once every five weeks is perfectly sufficient. This results in lower investment costs for renovation work.

Safety and hygiene

Make trip hazards in the form of moisture and dirt a thing of the past. All emco entrance matting systems feature certified non-slip properties and stop moisture from entering the building, which helps prevent accidents. What's more, they significantly improve hygiene levels in heavily frequented areas.

Sound absorption and atmosphere

A better quality of life: Textile clean-off zones reduce sound and create a pleasant atmosphere.

Increasing the life of adjacent floor coverings

emco mat systems help protect adjacent floor coverings by minimising the wear and tear inflicted on surfaces by dirt and by reducing the need for frequent cleaning. The floor coverings last longer, which is good news for your pocket and for the environment.

Lower costs: Built-in sustainability

Stop dirt in its tracks: Functional inserts (which can be supplemented by aluminium scraper bars and brush strips, where necessary) ensure optimum performance in terms of dirt removal. And they do this in a sustainable way, because rather than getting stuck in the mat, the dirt falls through the gaps between the mat profiles. The mats can be rolled up, allowing dirt to be subsequently removed from the matwell with the utmost ease. The net effect is that the 3-zone cleaning system is able to reduce cleaning costs by up to 90%.

Dirt reduction

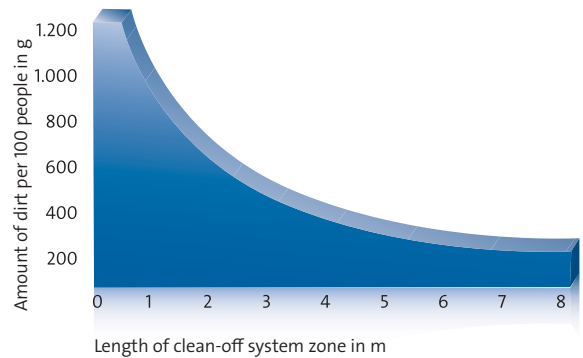

Safety

Sustainability

Reduction in the occurrence of dirt in relation to the length of the clean-off system zone

Cleaning costs (based on internal testing) in relation to the extent of the mat systems used
